

RAITECH

WE DESIGN AND BUILD INTELLIGENT MACHINES

Automation | Machine Manufacturing | Process Engineering | Robotics

Company Introduction · Tuzla, Istanbul

RAITECH

About Us

Let Our Engineering Experience Power Your Growth

Automation investment is complex — the right technology, a reliable partner, minimal risk. We know this firsthand: for 26 years, across sectors and countries, we've made these decisions together with our customers in nearly 500 projects.

From automation integration to machine manufacturing, from SCADA software to electrical panel design — we run every step in-house, taking on the risk and getting you to your goal by the shortest, safest path.

RAITECH

Why RAITECH

Let Your Production Move Forward With Confidence — Focus on your business while your technology works for you.

01

We meet face to face

We see your environment in person.

02

We define the solution together

We agree on scope and approach.

03

We bring it to life

Design, manufacturing, installation, commissioning, ongoing support.

26 years · nearly 500 projects · a business built purely on referrals

What We Do

We Design, We Build, We Deliver to the World

01

New Factory and Line
Setup

02

Machine
Manufacturing

03

SCADA Solutions

04

Revision
(Retrofit)

05

Custom Software
Development

06

Training and
Consulting

New Factory and Line Setup

We can understand how you carefully weigh countless options when expanding or renovating your existing factory and production lines, and plan thoroughly when making a new **investment decision**.

As RAITECH, we assist you in the planning process to find the ideal balance in your capital-intensive facilities, ensuring the most accurate and sustainable results. Whether turnkey from the beginning or project planning only for the required parts, we prepare proposals that account for all the necessary integrations.

RAITECH

Machine Manufacturing

We design machines from scratch, tailored to your production needs, and manufacture them in-house at RAITECH. From mechanical design to electronic systems, from servo motor selection to custom algorithms and software, we manage the entire process end-to-end.

Where standard solutions fall short, we develop machines custom-built for you that maximize your production capacity — running the process from design through commissioning under one roof.

Our robotic sack-sewing line is a fully automatic machine solution engineered and built by RAITECH for unmanned operation in real production environments.

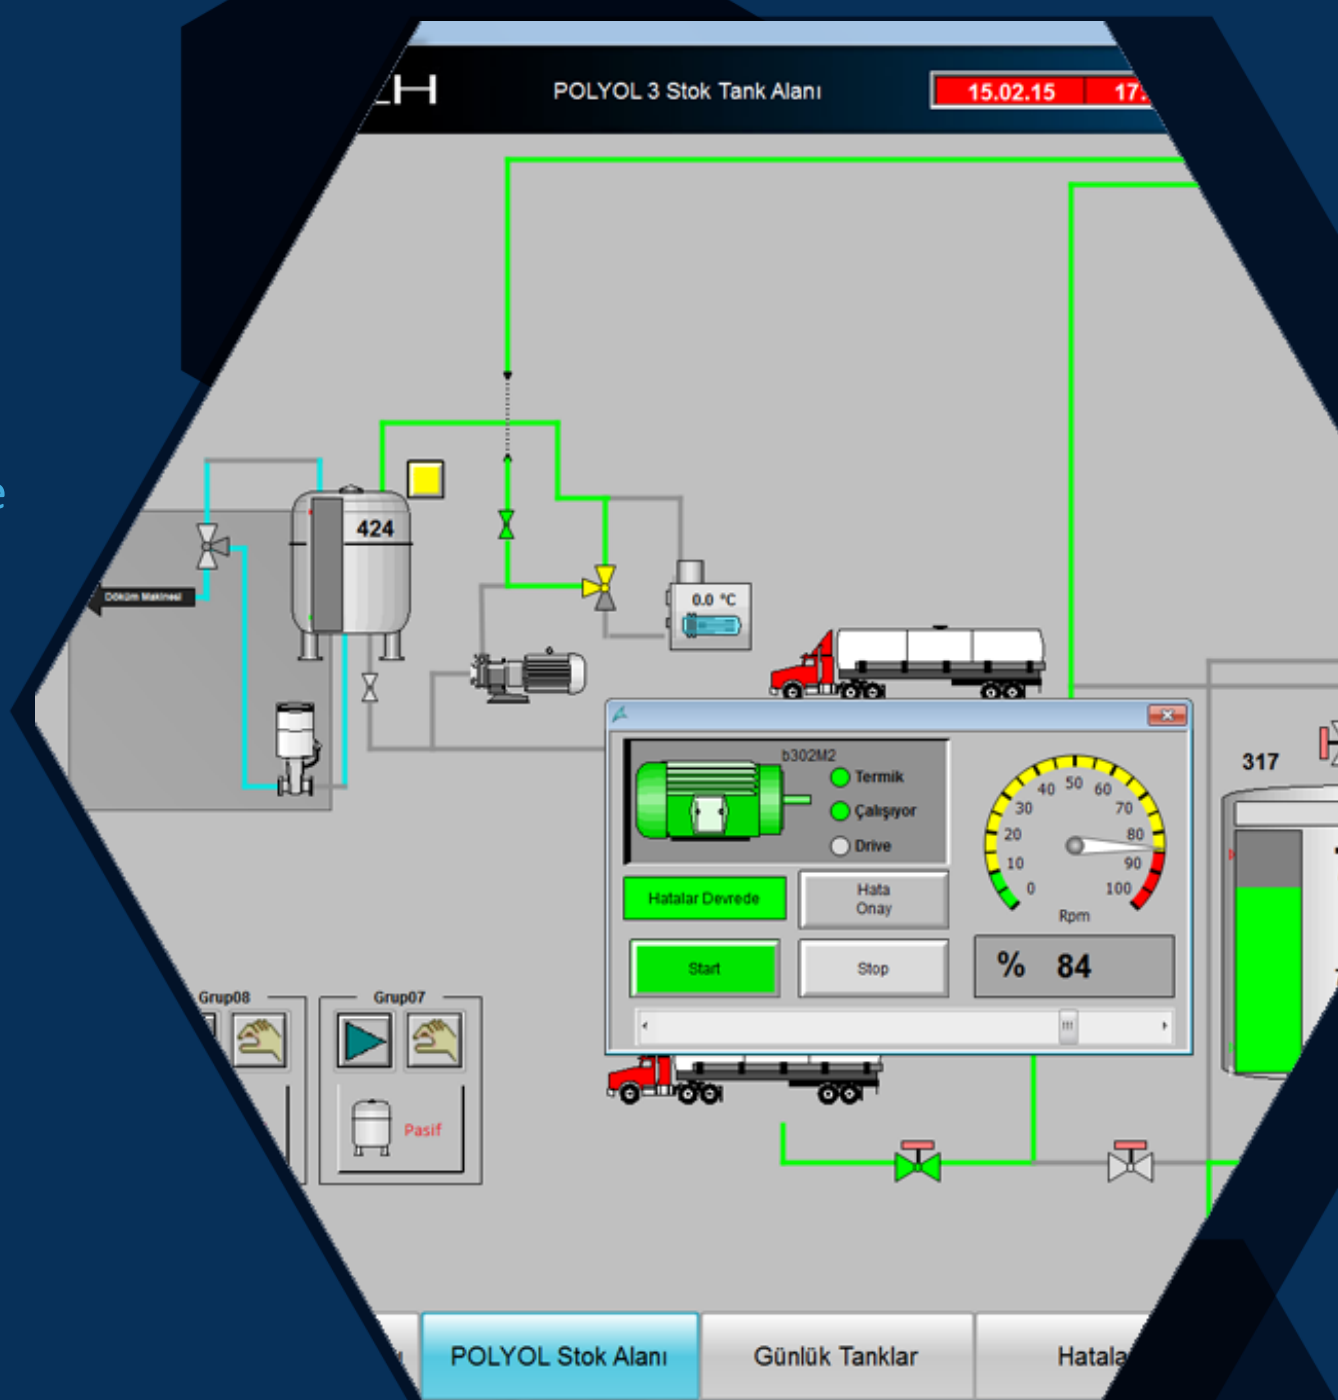

RAITECH

SCADA Solutions

Guaranteed Success Through Full Integration, in the Same Language.

We offer a modular SCADA/HMI experience across the full range of control and monitoring processes for your facility management and automation infrastructure.

We develop solutions that communicate with all of your facility's automation hardware regardless of brand or manufacturer, with configurable visuals tailored precisely to your machine or facility structure — ensuring ease of use in every situation.

Revision (Retrofit)

We know how much of a headache it can be to speed up, increase capacity, renew, or integrate new systems into your machines — whether they're currently running or sitting idle.

Sometimes you may think starting from scratch would be more efficient than a revision. Let us analyze your system first — see the value that idle machines can add to your operation once brought back to life by the right hands.

With an experienced partner, revision stops being a headache.

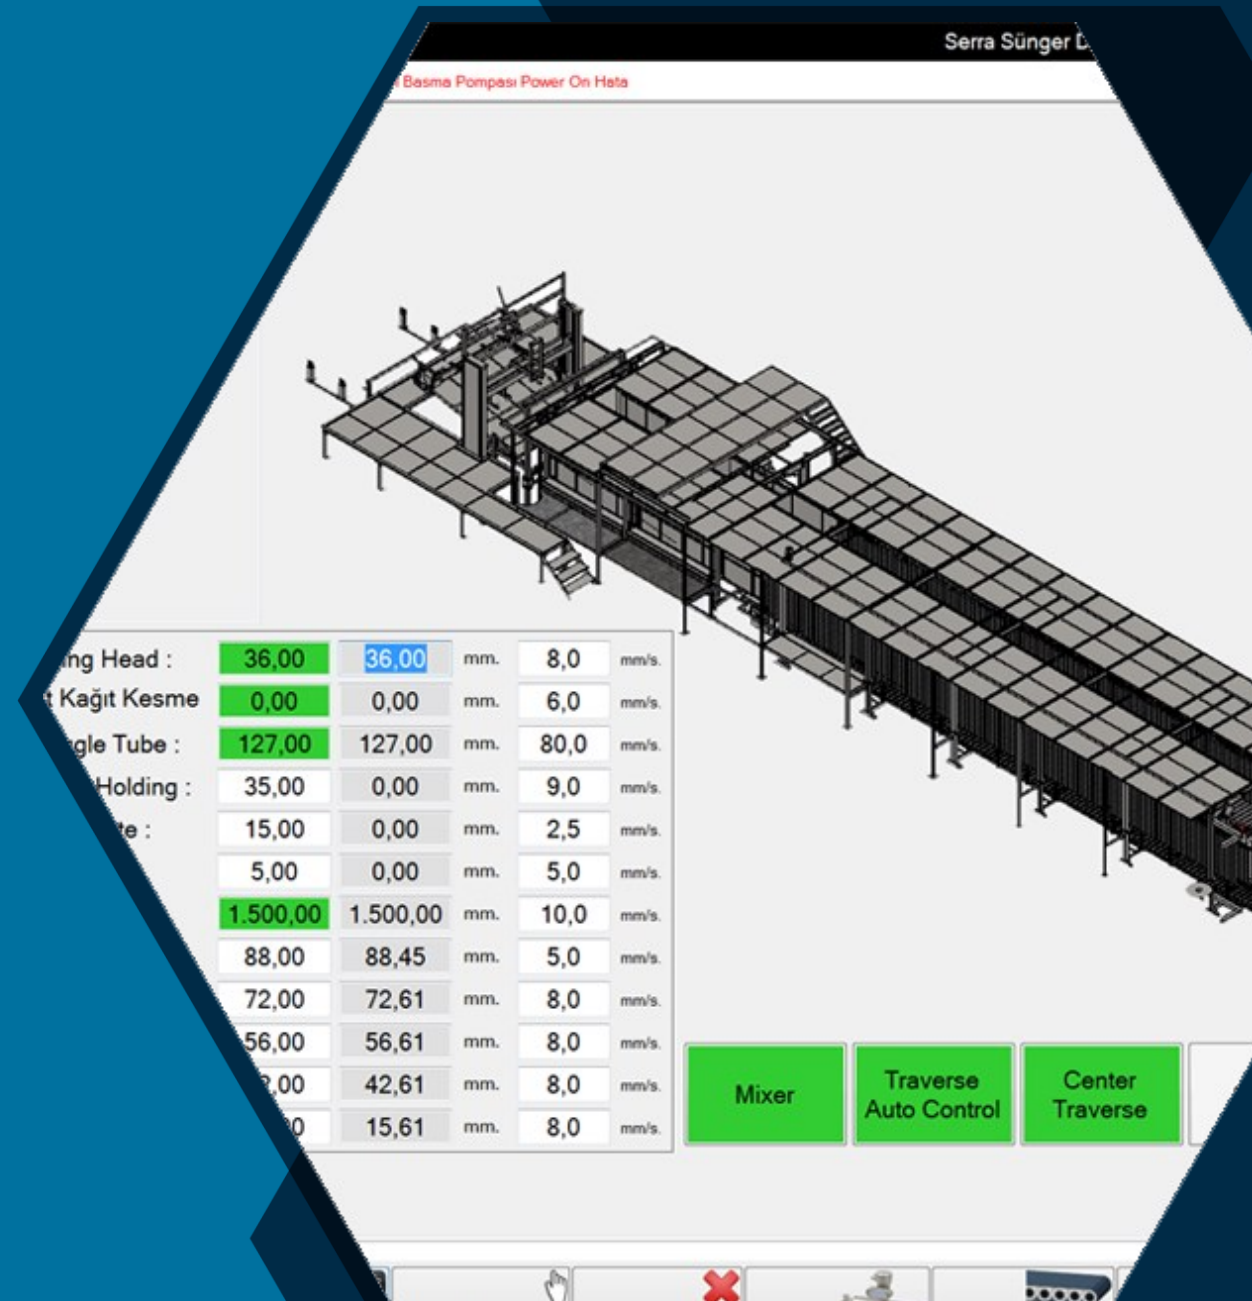

Custom Software Development

We design algorithms with versatile functionality, high reliability, and a broad solution network for the processes where you want fast, high-quality, and high-efficiency results.

For optimized processes and a seamless workflow, we integrate these programs with real-time simulations without stopping your system — minimizing your risk.

With our learning, evolving software, we promise you a sustainable future.

RAITECH

Training and Consulting

All hardware selection, software development, and system commissioning is carried out in-house at RAITECH.

This means our expert team is always available for technical support, as well as training your own team, providing the necessary training, and supporting your processes with fast solutions whenever you need them.

RAITECH

Our Products

Our Product Family — Machines & Software

01

RAITECH BAGLINE

02

RAITECH PALLET ONE

03

RAITECH INSPECT ONE

04

RAITECH QCC 2000

05

PRESS TRANSFER
SYSTEM

06

SCADA / ENERGY / MES

Our Products

RAITECH BAGLINE — Fully automatic robotic sack-sewing line, running unmanned in real production.

RAITECH QCC 2000 — High-speed mobile counting and sorting system, up to 2,000 packages per minute.

RAITECH PALLET ONE — Fully automatic robotic palletizing with barcode-driven, multi-pattern recipe management.

PRESS TRANSFER SYSTEM — In-press part transfer automation for hydraulic, servo, and eccentric presses.

RAITECH INSPECT ONE — Modular quality-control platform combining vision, counting, and barcode inspection.

SCADA / ENERGY / MES — Brand-independent facility monitoring, energy tracking, and production execution.

RAITECH

Industries We Serve

Every sector brings its own challenges. We've built solutions for seven of them.
